

Landscape & Amenity

PRODUCT UPDATE

Japanese Knotweed back at Saltex

Japanese Knotweed Control and its sister company, Stem Injection Systems were able to renew old acquaintances at Saltex and take orders for both their stem injection system and new equipment.

They also launched a new fully accredited training course in Japanese Knotweed treatment, available through SLIC Training.

This provides essential vocational training to any individual or organisation involved in treatment programmes, and is ideal for colleges wishing to train their own students.
